1. Figure 1-4 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Prior art fig 1 in application in view of Yang and Sheu et al .

Prior art fig 1 discloses dc power source, relay having normally open contact and closed contact, dc motor connected to power source through open contact of relay. Prior art fig 1 lacks discharge circuit having switch solid state device coupled to closed contact of relay, discharge circuit operable to inhibit current flow from dc motor until relay is in normally closed position. Yang discloses delay circuit with discharge circuit see fig 8 , R502,C502,RY502 and col 7 lines 30-35. Sheu et al discloses transistor with delay

circuit and discharge circuit see col 2 lines 60-67, col 4 lines 3-11, and col 6 lines 28-42.

It would have been obvious to one of ordinary skill in the art to combine drive circuit of dc motor of Prior art fig 1 with delay circuit and discharge circuit of Yang and Sheu et al for improved control .
